

# DIGITIZATION

## The Key to Success in your Production

gain valuable insights & make better decisions

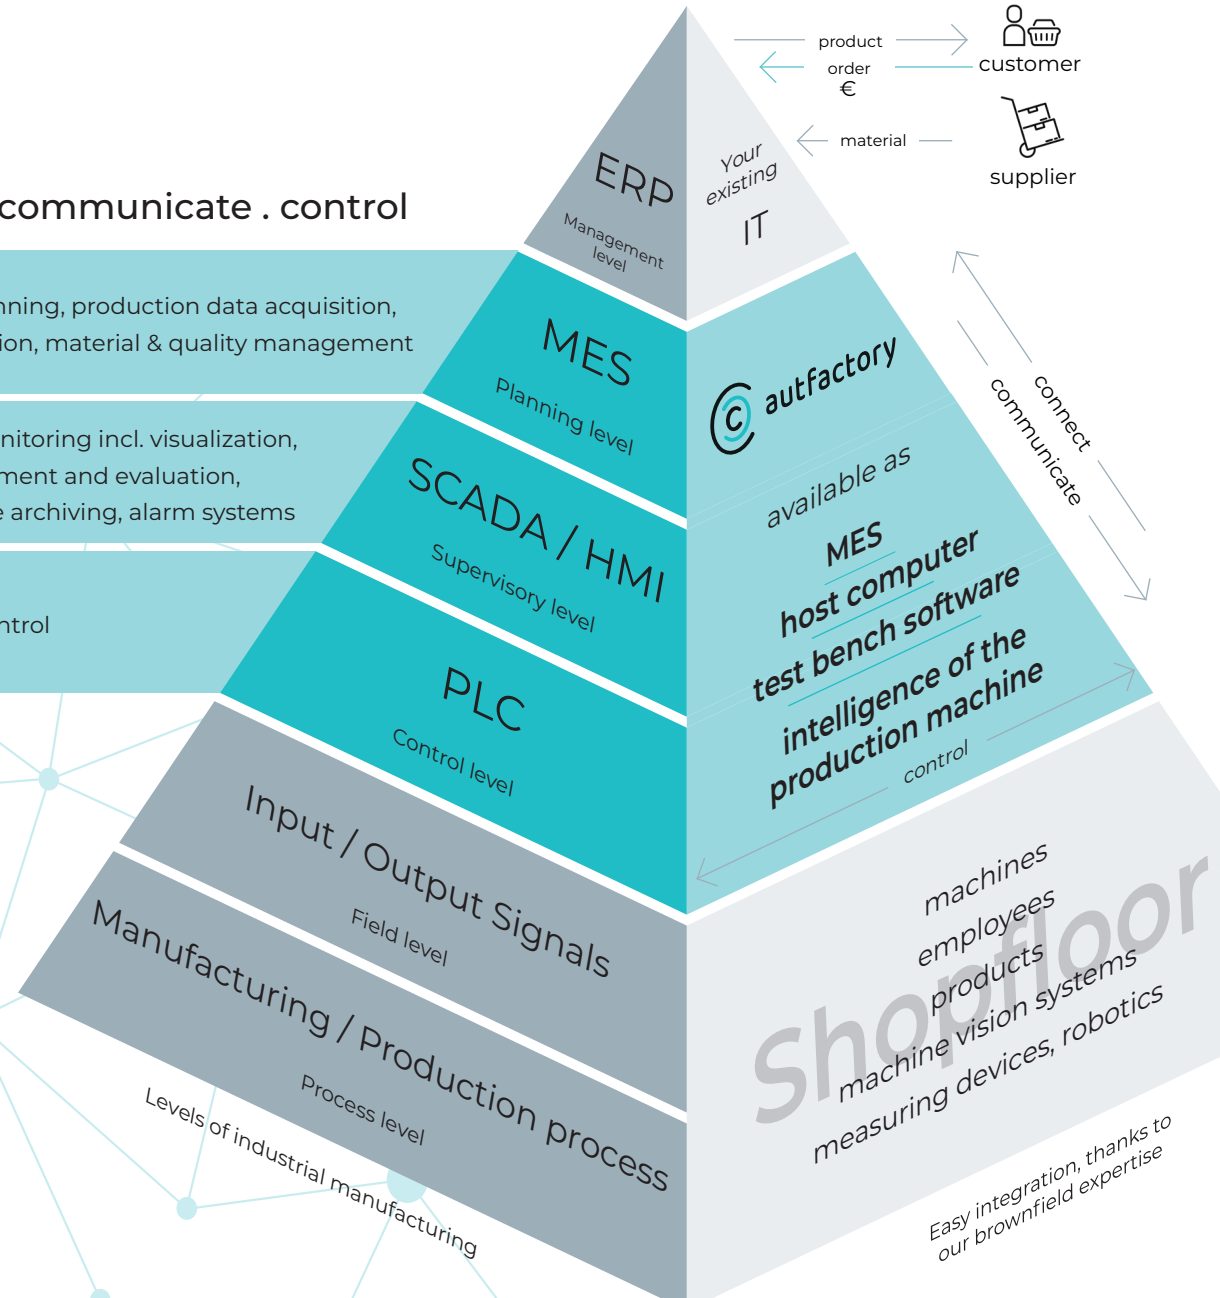

connect . communicate . control

production planning, production data acquisition, KPI determination, material & quality management

operating & monitoring incl. visualization, recipe management and evaluation, measured value archiving, alarm systems

command & control

- ✓ intelligence and communication capability for machines
- ✓ connect isolated solutions - unite systems
- ✓ open to new approaches in the area of Industry 4.0 (AI, etc.)
- ✓ available interfaces: SAP, Navision, OPC UA, Sinumerik TIA, CAN, etc.

# OPEN TO THE FUTURE

## Flexible MES - Configuring Instead of Programming

### Boost your Production - with autfactory

- » autfactory is fully integrated into the web
- » can be used device-independently, only a web browser is needed
- » intuitive user interface
- » integration of third-party software products possible

### Future-ready Thanks to:

- » communication via REST API
- » web-based application
- » open interfaces like MQTT and OPC UA
- » latest Microsoft technologies

### We Think Differently

- » Licensing on machines and services - [pay what you need!](#)
- » Unlimited number of users and variables - [no additional cost!](#)

FRONTEND

### Integration of External Plug-ins

autfactory creates the framework to work with data of the external plug-ins, e.g.:

- » webcams
- » knowledge base
- » environmental data (weather, humidity)
- » data from ERP system

### Micro Service Systems

- » Integrate manufacturer functions
- » Program your own functions. Either with our programming libraries (DLL's), or in other programming languages (C++, Python, etc.)
- » Only buy the functions you need!

BACKEND

### 20 years of experience in the control level & field level

Data consistency and reduced communication load thanks to event-based communication.
